

Equivalentes: tienen las mismas soluciones. Ej.:  $x + 4 = 10$  y  $2x = 12$  (ambas  $x = 6$ ).

1) Escribe una ecuacion equivalente y halla su solucion

a)  $7 + x = 13$

---

---

---

---

b)  $x + 2 = 9$

---

---

---

---

c)  $x - 4 = 4$

---

---

---

---

d)  $11 + x = 9$

---

---

---

---

2) Determina si los pares son equivalentes

a)  $x + 2 = 7$  y  $2x = 10$

---

---

---

b)  $x - 1 = 4$  y  $x + 2 = 7$

---

---

---

c)  $3x = 6$  y  $x = 2$

---

---

---

d)  $x + 5 = 9$  y  $x + 1 = 3$

---

---

---

e)  $2x = 14$  y  $x = 7$

---

---

---

f)  $x + 3 = 8$  y  $x + 3 = 10$

---

---

---

3) Obtiene una ecuacion equivalente usando la regla indicada

a)  $x = 3$  (suma 5 a ambos)

---

---

---

---

b)  $x = 10$  (multiplica por 2)

---

---

---

---

c)  $x = 7$  (resta 1 a ambos)

---

---

---

---

d)  $x = 2$  (divide entre 2)

---

---

---

---
